Eric Perkun

# Database

This is our database structure where we have a cards, marketplace, and users table.

For our cards table this is obviously where the cards are stored but we also have columns to clearly define what card is what and where it should go.

◆ card_id	Card_id gives each card a unique key that is given to the account who owns the card
◆ name	The cards name
◆ category	The category you assign to the card
◆ set_name	The name you want to give the card
◆ rarity	The rarity of the card
◆ condition	Condition of the card
◆ value	How much the card is worth
◆ is_favorite	Can mark if this card is your favorite or not
◆ date_added	Date the card was added
◆ date_modified	Date the card is modified
◆ user_id	What user the card is attached to

## ▶ marketplace

This is the marketplace table where all the cards on the market place are stored. There is a add new card function in here as well instead of pulling from your already existing cards to prevent accidentally placing cards from your collection on sale

◆ id	Id assigned to card upon creation
◆ name	Name of the card being listed
◆ category	Category of the card
◆ rarity	The rarity of the card being listed
◆ Price	How much the card will cost
◆ date listed	Creates a timestamp of when the card is added

## ► users

Users table where the users information is stored.

◆ user_id	Id of the accounts
◆ cards_id	The id of the cards attached to accounts
◆ email	Users email they registered with
◆ username	Users username
◆ password	Password is hashed and stored here
◆ date_registered	When the account was made
◆ date_modified	Date the account is modified

# File Structure

Create Account

[Already have an account? Login](#)

# Register

This is the register page, from here you can register your account using a valid email address, set your username, and create a password that will be hashed for safety when it is stored in the database. We also have the darkmode function in the top right corner and it is saved when you come back to the page. We also have the feedback function on each page of the website so that we can see user recommendations and use those to make the experience better.

## CardTrack Login

**Username**

**Password**

☐ Remember me

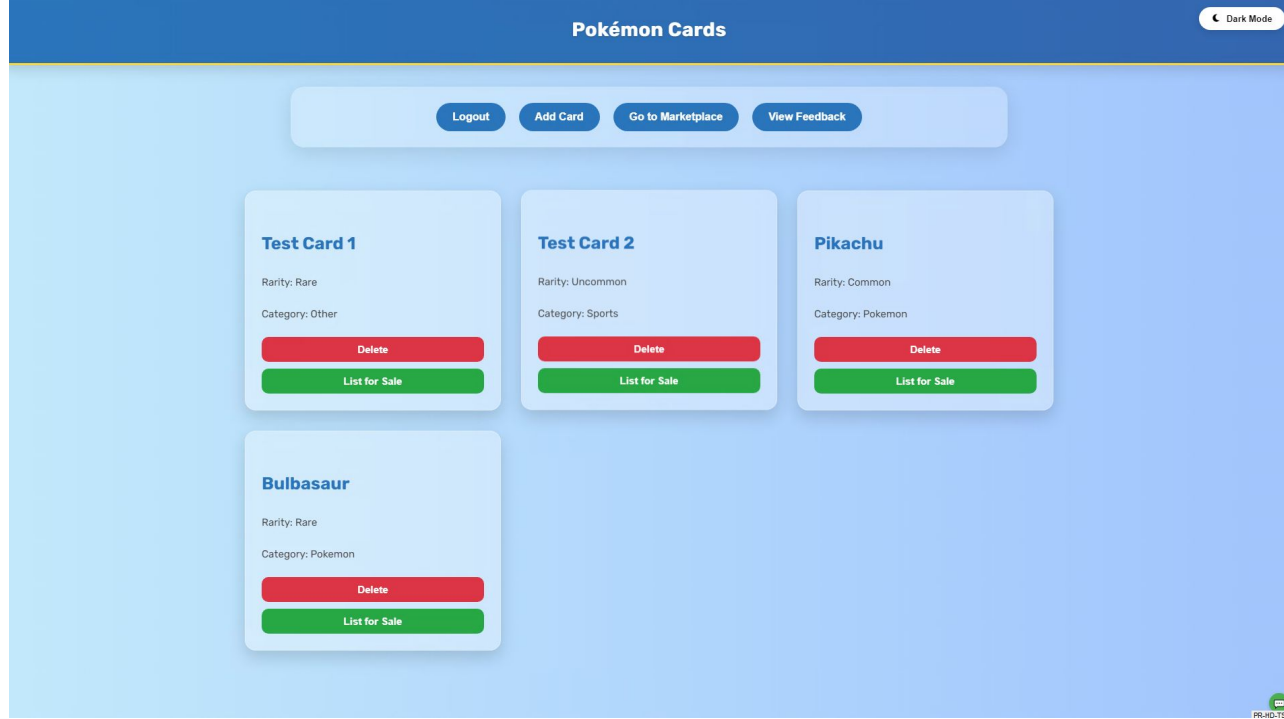

**Login**

[Don't have an account? Register](#)

## Login

Here is our login page. From here you can either register a new account or login to your already existing account. We have also included a remember me function as well as a dark mode toggle so that its easier on your eyes and is saved when you come back to the page.

## Card View

After logging in, you are brought to the main “Card View” page showing all of the cards you have saved in your account. From here you can add and delete cards, list them on the marketplace, or browse the marketplace.

### Market Analytics Dashboard

#### Daily Listing Trends

#### Price by Rarity

#### Price Distribution

### Market Insights

Here you can see the cards available and the graphs we have for our analytics!

Marketplace PT. 2

### Market Insights

- Fire-type cards are the most listed (1 cards)
- The average card price is \$70.50
- Most expensive card: Mewtwo (\$120.00)
- Market prices are trending down 0% recently
- Total marketplace value: \$211.49

### Recommendations

Based on current market data:

- Consider listing more Fire-type cards as they are in demand (only 1 available)
- Legendary cards have the highest average price (\$120.00)
- The \$0-10 price range has the least competition (0 cards)

Here we have included market insights and recommendations!
