Use case: Delete Card from Collection

Description: Describes the process by which a user can delete a card from their collection. The card is removed from the database is no longer visible in the user's collection

Delete Card from Collection

User

The user must be logged into their account

The user must have an exciting collection with at least one card

Navigates to their card collection

User clicks on a specific card within their collection

System prompts for deletion confirmation

"No" or "Cancel" → The system closes the confirmation dialog, and no changes are made to collection

"Yes"

The backend removes the card record from the database and collection

The collection page refreshes, and the deleted card no longerappears in the user's collection

System displays a success message

Exceptions:

1. **Database Error:**If the database fails to process the request, an error message appears: "Unable to delete card. Please try again later."
2. **No Card Selected:**If the user attempts to confirm deletion without selecting a card, an error message appears: "No card selected. Please choose a card to delete."
